

## **PMC Ouvrie appoint the Plater Group as their distributor for the UK** **Global expertise in defoamers and foam control**

PMC Ouvrie's range of industry-leading defoamers are suitable for all types of foam issues in every industry. Their defoamers are specially formulated for applications in the sugar/alcohol distillation, fermentation, agri-food, biotechnology and wastewater treatment industries. These products are essential process aids for a wide range of industries to ensure maximum productivity and minimise downtime.

PMC Ouvrie is also a premier manufacturer and developer of specialty esters for various applications, including use as emulsifiers, stabilisers, defoamers and antifoam solubilizing products.

Excessive foaming can lead to serious problems in a range of processes across a broad spectrum of industries. A significant build-up of foam can reduce equipment capacity, decrease manufacturing output, impact on product quality and have an effect on safety. For this reason, PMC OUVRIE is constantly working to develop and enhance its range of defoamers and anti-foaming agents that will reduce and suppress the formation of foam in the industrial process.

**PMC OUVRIE** are located in Carvin, France: the heart of the largest agri-food producing region in Europe.
